ARCSIGHT RELEASES SECURITY INFORMATION MANAGEMENT SOFTWARE FOR MAC OS X

Award-Winning ArcSight Software Turns Security Data into Business Information for Enterprise Networks Using Mac OS X

SUNNYVALE, Calif. – May 17, 2004 – ArcSight, the leading provider of enterprise security management software, today announced that its award-winning software will be available to customers using Mac OS X. This release extends the reach of ArcSight's security information management products to businesses utilizing Mac environments.

"ArcSight's strategy has always been to support best of breed infrastructures among our enterprise customers," said Robert Shaw, chairman and CEO, ArcSight. "The addition of Mac OS X to ArcSight's broad range of platforms, combined with our support for an ever-increasing number of security devices, underscores our commitment to working with our customers' preferred environments."

"Mac OS X Server is the perfect platform for setting up complex network services, running enterprise applications, and deploying dynamic Web sites and services," said Ron Okamoto, Apple's vice president of Worldwide Developer Relations. "ArcSight's Security Information Management Software for Mac OS X allows enterprises to easily manage their security-relevant infrastructure while taking advantage of the reliability and high performance of Mac OS X."

About ArcSight Enterprise Security Management

Over the past several years, companies have installed large quantities of firewalls, intrusion detection systems, VPN's and a host of other heterogeneous security products. These products generate unmanageable amounts of raw data in isolation, and are outmatched by today's sophisticated multi-source, multi-target attacks.

As a result, the gap is widening between the true level of threat to an enterprise and what its current infrastructure can detect and resolve -- organizations have not achieved the security results or return on investment that they require.

ArcSight offers a suite of software solutions designed to bridge this enterprise security gap, and deliver the protection and productivity that large organizations require from their security investments. The ArcSight architecture is comprised of a data collection, analysis and storage system which consolidates network-wide alarms and alerts while detecting true threats and attacks, as well as a display and reporting function to manage the results.

About ArcSight

ArcSight, winner of Network Computing magazine's Editor's Choice and the NetworkWorld Blue Ribbon and Best of the Tests Awards, is the leading provider of enterprise security management software. By linking security management to key business assets and processes, ArcSight is enabling large organizations to achieve increased protection, greater productivity, operational confidence and compliance support from their security function. ArcSight's integrated solution spans all the critical security management functions, including event aggregation and archiving, real time analysis, incident investigation, attack remediation, reporting and audit. ArcSight is the first vendor to offer TruThreat™ Risk Correlation, which allows enterprises to focus on the protection of the business by utilizing asset mission and value information, vulnerability assessment data, and security alarms to identify and mitigate threats and attacks in real time.

ArcSight's customers include major financial services organizations, government agencies, manufacturers and service suppliers such as the Internal Revenue Service, Telindus, Harris Corporation, Department of Health and Human Services, Union Bank of California, Defense Information Systems Agency, NTT, and Unisys.
